AUTOMATIC REGISTRATION FOR A MILITARY DRAFT!?!
Will this affect ME???

What exactly is happening? In December 2026, the national Selective Service System (SSS) may begin trying to automatically register all 18-25 year old male citizens and immigrants for a possible future military draft.

Why is this happening now? Although there currently is no active draft, men have been expected to register themselves when they turn 18, and tell if their address changes later. IN FACT, millions of men have failed or refused to do so, which has currently made a draft practically impossible.

What difference will the new automatic SSS law make? If it succeeds, it will increase the number of people registered by collecting their names and addresses without their consent, create one of the largest databases ever, and thus make a future draft more possible!

What if the SSS doesn't have enough information to automatically register everyone? If your address can be obtained—e.g., using state driver licenses or other records—you could be sent a letter demanding that you share your personal details.

What if you receive such a letter ~~is received~~? There are LOTS of CHOICES!

- ignore the request
- do not accept a letter if a signature is requested when delivery is attempted, and tell who you're living with not to accept it;
- give the government the information they need to register you;
- begin now to document why you would oppose a war;
- get active in efforts to oppose the draft and war;
- scan the QR code below for resources and advice on these and other options

What else do we know about "automatic" draft registration? As of Nov. 1, 2026, the SSS had not published any details about the program. However, many concerned community groups linked at the QR code are posting updates:
